

List of references

I am writing this references on behalf of Ventum Air, approved training organization by EASA.

First of all, I have to mention that I did the whole training program from Zero to FATPL. I did it in parallel to my academic degree in Aviation Management, therefore it took me three years to finish the program. Due to that fact I had a chance to familiarize with the school much better and be a part of its history.

Based on my personal experience, I can say that Ventum Air has very good set of values. Its instructors provide a very good level of training. The management team has the best approach in the business. Because of that, everyone is treated very personally and time management is at best efficient for students.

I will not exaggerate if I say they have the best fleet of aircrafts in Poland. Absolutely new aircrafts at your disposal. The twin engine Tecnam P2006T will give you Glass Cockpit preparation. Same type of preparation you will have on the newest IR simulator in Poland, Full Motion RED BIRD. All of that, together with very experienced personnel of instructors will equip a student with a ready-for-airline flight training.

I can confirm that on my example, as I got a pilot job in the biggest airline in Europe, shortly after finishing my training program. I wish the very same to all students who undergo professional pilot studies in Ventum Air Flight Academy.

Many thanks to the whole team at Ventum Air,
Aleksander Terech.
